Biocomposite Series

# Sulapac®

Nissha ecosense Biocomposite Series offer organically recyclable packaging solutions made of bio-based materials such as real wood chips and non-visible natural clay.

Our jars biodegrade without leaving permanent microplastics behind. Visible wood chips reflect a message of natural content inside, while mineral clay composite gives off a luxurious impression to consumers.

In addition to our standard jars, Nissha offers one-stop solution from custom product design to full-production in local upon request from customers.

Sustainable, Beautiful, Functional  
Like nature.
