

microphyt
Fostering a blue future

Inspired by nature and enabled by biotechnology, we develop, produce and market microalgae-based solutions for health and beauty.

Microalgae Expertise

With a passion for the invisible life forms and for the power of symbiotic relationships, we have set ourselves **the mission of accessing and delivering the full innovation potential of microalgae.**

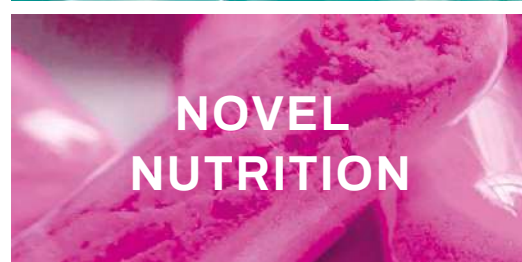

Exclusive Biomimetic Technology

Patented by Microphyt, CAMARGUE photo-bioreactor is the first ever hydro-biomimetic technology that unlocks the untapped microalgae diversity and enables us to develop the next generation of innovative ingredients.

New solutions for health and wellness

Studying the physiology of microalgae and the potential of their bioactives, we can draw on new ways of addressing the key societal challenges with natural active ingredients for cosmetics and nutraceuticals.

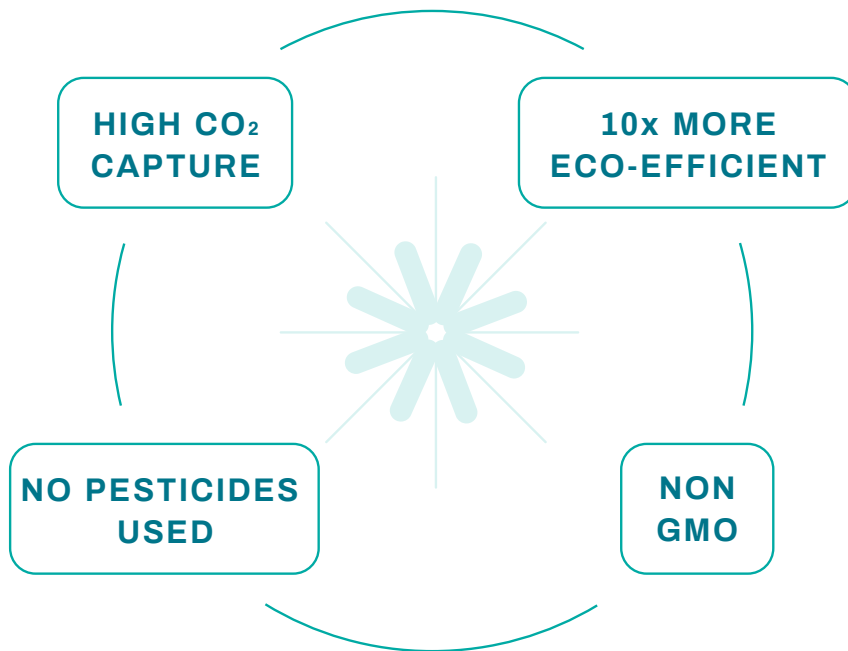

Making a positive difference

Our commitments are directly inspired by the project we are building and, above all, the conviction that the natural properties of microalgae can help solve today's health and well-being challenges. We are ready to contribute to a healthier world through the benefits of our products and, by assuming a more conscious, responsible role in our social and environmental ecosystems.

Safe, effective & sustainable ingredients

With the most rigorous scientific standards in preclinical and clinical studies, our Product Development team enable the validation of our ingredients efficacy and safety.

Ecological Production Platform team manages every steps of the scale-up which enables a standardized and consistent supply of the active ingredients.

MICROALGAE BIODIVERSITY

Specie selection

R&D EXPERTISE

Focus on specific bioactives

SUSTAINABLE AND EXCLUSIVE PRODUCTION

Exclusive biomimetic technology

Green and environmentally sustainable production

NOVEL BIOACTIVES

Rigorous scientific standards in preclinical and clinical studies to ensure efficacy and safety

At the crossroads of life sciences and bio-processes,
we develop the next generation of natural
ingredients from microalgae for a better living.
