MEDIA STATIONS

— COMPLETE CUSTOMIZED PACKAGES

In many of our projects, we have developed specially made, customer-specific products that integrate a number of different media systems. We do this by combining individual components and high-quality technology to create a simple and elegant design focused on functionality and durability. For the components, we prefer to use products already available in our own range. The AIO station, for example, combines our AP01 audio player with our trusted headphones and handsets, to form a self-contained functional unit.

As plug and play packages, our media stations can be put into service immediately without any additional adjustment or prior technical knowledge. At the same time, you can configure the content and the user interface to suit your specific needs.

Because we manufacture these standard products in small batches in our own workshop, we can also supply systems customized to your requirements.

MEDIA STATIONS MUSE MULTIMEDIA COCOON CHAIR

MULTIMEDIA COCOON CHAIR **MUSE**

The multimedia cocoon chair MUSE creates a space for relaxation, concentration and retreat, while also inviting visitors to sit back and listen to audio and music with its integrated loudspeakers and media technology.

Its basic function is that of a comfortable cocoon chair, which achieves a high degree of separation from the outside world without being completely cut off; an open front ensures eye contact with surrounding people and participation in events going on outside the chair are still maintained.

The handcrafted cushions provide a high level of seating comfort. The fabric covers can also be easily removed and cleaned, allowing the chair to be used even in places with high visitor numbers. When selecting the fabric, attention was paid to low susceptibility to dirt, high resistance to abrasion and colour

fastness. Thanks to the wide choice of colours for the interior and exterior covers, our MUSE chair can be individually designed to fit in with its surroundings. The supporting base frame is made of curved flat steel and is available either powder-coated or chrome-plated as standard.

The technology inside the chair is optimally set up: Hidden integrated speakers are arranged in a “stereo triangle” to provide a balanced listening experience, while acoustic insulation elements ensure optimal audio quality inside the chair and mean that very little sound penetrates to the outside. An LED panel in the ceiling area, meanwhile, provides atmospheric lighting.

All the media technology is controlled by a swivel-mounted touchscreen, the interface and content of which can be designed and configured as desired.

The versatile cocoon chair is available in a number of different versions and is manufactured according to individual needs and wishes – which applies to both the colour of the fabrics and the technical equipment.

For example, the entire chair can be upholstered with or without any additional technology. Optional extras include a circular panel in the ceiling area, which provides atmospheric lighting that is synchronised with the audio playback, as well as bass speakers installed under the seat for more structure-borne sound.

Our MUSE chair is made to order, allowing customers to pick and choose from a range of options to design a solution that is tailor-made to their needs.

Chair dimensions without monitor: 1058 × 1021 × 1724 mm (D × W × H) | **Control monitor (display):** 10" | **Weight:** approx. 120 kg

MUSE FABRIC COVER COLOUR CHART

Exterior fabric PONTI

Interior fabric GAVI

Exterior fabric: Manufacturer: Delius; flammability: DIN 4102/B1; abrasion resistance (Martindale): approx. 30,000 cycles | **Interior fabric:** Manufacturer: Delius; flammability: DIN 4102/B1; abrasion resistance (Martindale): approx. 80,000 cycles
