Additive manufacturing training and Siemens NX

Whether you're a beginner or expert or looking for a bespoke package – trainings range from basic and expert level to individual training, e.g. for operators or visual inspectors. We also offer a training course certified by the Chamber of Commerce and Industry (IHK) for industry specialists in additive manufacturing. Training courses in Siemens NX include the basics of CAD and NX as well as specialist training, e.g. on build job simulation or multi-axis deposition.

Siemens NX Software

Siemens NX has industrialised additive manufacturing. This allows you to reimagine your products, make your production processes more efficient and even revolutionise your business model. As a Siemens NX AM Expert Partner, AMbitious can support you with the implementation and use of Siemens NX software together with its modules along the entire AM process chain.

Consultation for every step of the AM process chain

AMbitious offers practical advice and support for use in practice. toolcraft AG has been manufacturing 3D-printed components since 2011. With AMbitious, our aim is to share our long-standing experience in additive manufacturing with you.
